

North American Midway Entertainment is committed to providing a safe family environment. This commitment starts with our onsite Safety Coordinators who work closely with state and local authorities to ensure that our rides pass and exceed inspections and examinations. It is the policy of North American Midway to achieve the greatest practical degree of freedom from accidents and to ensure every guest is provided safe and healthful conditions free from recognized hazards. We've also established and insist upon safe practices at all times from all employees. In 2010 NAME deployed the most aggressive ride safety program in the industry. This program encompasses bi-annual comprehensive non-destructive testing (NDT) for every single ride in the company inventory. In addition to the manufactures required NDT and scheduling of frequent third-party inspections throughout the season.

North American Midway understands that to offer the highest quality of standards in the outdoor amusement business that we must recruit and retain quality employees, for the employees are the backbone of our entire operation. These employees stay with our show the entire season, which concludes early in November, through-out our operating season employees will attend numerous safety and customer service seminars hosted by NAME management or professional training sessions.
